

Sentiment Analysis on Twitter Data

Project Description

This project uses Natural Language Processing (NLP) and Machine Learning to classify tweets as Positive, Negative, or Neutral.

Features

- Tweet preprocessing
- Stopword removal
- Lemmatization
- TF-IDF vectorization
- Naive Bayes classification

Technologies Used

- Python
- Pandas
- NLTK
- Scikit-Learn

Installation

```
```bash
pip install -r requirements.txt
```
```

Run

```
```bash
python app.py
```
```

Dataset

The dataset contains tweets with sentiment labels:

- Positive
- Negative
- Neutral

Output

The model predicts the sentiment of user-entered tweets.
